

BPI LOAD GUIDE:

LBC SABOT SLUGS™

WWW.BALLISTICPRODUCTS.COM

UPDATED: SEPT. 2022

The design of the 12 gauge LBC Sabot, with integrated gas seal and sabot collar, merges established rifled-shotgun accuracy of sabots with the impact energy of traditional slugs. Slug shooters now have the opportunity to custom manufacture powerful, big-game class ammunition with rifled sabot accuracy.

Like all Dangerous Game Slugs, the LBC Sabot Slug, is engineered for in-flight stability and maximum impact at the target. The lead portion is a hardened .620" diameter slug encased in a two-piece fall-away sabot. The uncompressed outside diameter of the sabot is specified for modern rifled barrels at .725".

The LBC Sabot's exterior is etched with distinctive bore rings. This unique design creates a more efficient seal while reducing bore contact and friction. Above the gas seal are tubed, energy damping crush-sections that absorb the abrupt energy of setback, which produces a stabilized projectile. The result is higher velocity, greater shot-to-shot consistency and lower pressures.

Loading Tips: Carefully insert the entire slug/sabot ensemble into the hull. Only gentle wad pressure is necessary. Use a pad (a nitro card wad or something similar)

Technical Specs:

| | |
|------------------------|----------------|
| Sabot Diameter: | .725" |
| Slug Diameter: | .620" |
| Sabot Length: | 1.95" |
| Slug Length: | 0.899" |
| Slug Weight: | 7/8 oz |
| Total Wgt.: | 1 oz (w/sabot) |

LD12LBCSS

between your rammer tube and the top of the slug. This will help prevent damage to the tip of the slug.

Spire tip slugs placed within a tube magazine (i.e. pump or automatic shotguns) must not have any protrusions from the crimp. Although it is unlikely, it is possible that the tip of the protruding slug could impact the primer of the shell in front of it. This could be extremely dangerous. A pointed slug should be covered with a cardboard or plastic overshoot card. Fold crimping is also a viable solution. If the hand-loader fails to heed this loading instruction, only one slug at a time should be placed in a tube magazine.

Data contained herein supercedes all previous data.

RIGHT: Our GAEP line of roll crimpers work wonders with slug loads. Simply place an overshoot card on top of your slug and place it in a hull vise or case block to secure before lowering your drill press onto the mouth of the hull. The GAEP series of crimpers are designed to work most efficiently at 900 RPMs or more

INSET: GAEP Deep-Neck Roll Crimper for Slugs

TOP: Note the finished LBC Sabot Slug load should not show any hint of the spire tip on the slug protruding above the top of the hull. A protruding slug can, potentially, impact the primer of the shell in front of it in tube-type magazines creating a dangerous situation. Exercise caution when loading the LBC Sabot Slug so as to avoid this scenario. We strongly encourage the use of cardboard or plastic overshoot cards over the tip of slug to provide a nice, level, platform to crimp against and remove the possibility of incidental contact between the sabot tip and primer.
