

20/2A.1 Multi-Hull Loads

- 20 Gauge 2-3/4" Multi-Hull
- Manufactured by Cheddite to BPI MultiHull specifications

Editorial notes:

For better roll crimps (and fold crimps) in the 20 gauge, use an overshot card on top of the shot.

The CSD20 is sold unslit to allow for customized pattern control. The loader MUST cut the wad into (at least) four petals, approximately one inch in length or longer.

Non-Toxic 20ga Loads: The 20gauge is generally construed as a very nive upland bore designed for quick, nimble work. Although BPI lists non-toxic loads for the 20 gauge, that does not necessarily make the 20 gauge a goose gun. Limit your 20 gauge loads to small, duck sized pellets. The lighter 20 gauge barrel weights are not designed for the rigors of large shot sizes. In waterfowling, the 20 gauge rapidly reaches a point of diminishing returns.

The Multi-hull crimps easily. On the first firing, give it some extra time at the crimp start station to develop a memory in the plastic.

The CH209 primers referred to in the data are Cheddite 209 primers that come with these Multi-Hulls.

Key Components you will need:

- ✓ OB20 gas seals
- ✓ Overshot cards wads

Warning: Where data contained on this label and in catalogs and booklets list specific components; no changes or substitutions for these components can be made, except substitutions of shot sizes that will equate to exactly the same weight charge listed, without risking significant changes in the level of ballistic performance and/or safety of the loads shown. Follow loading data exactly and do not substitute components. We make no warranties, express or implied; limited or full; specifically disclaim any and all warranties of fitness for particular purpose and merchantability; and specifically disclaim any and all liability for consequential damages of any kind whatsoever. Failure to comply with standardized warnings of reloading, lead and all other pellet types; dram equivalence; powder and primer storage and measurement; component applications and the safe and appropriated use of firearms per se or the use published data exactly as shown may result in accidents with serious injury and/or death to the shooter and/or bystanders.
